EXPRESS TOOLS

If you do not have the EXPRESS pull down menu option, then at the command line type (as one word) [expresstools](#). This should put the menu at the top with the other pull down menus. Below are some of the tools that I use all the time and it makes things more efficient. Take the time to explore some of these tools...you might be surprised at how much time it can save you.

This is the Express Tools Layer toolbar. It makes it very easy to turn layers on and off or to isolate layers.

This is an easy way to make a break-line

In the Text toolbar I use the Convert Text to Mtext and the Change Text Case all the time. You can also Mask Text which will hide the entities behind the text, for clarity.
